

The State of Nevada Hazard Mitigation Plan

October 2007

Governor
Jim Gibbons

Lt. Governor
Brian Krolicki

Nevada Department of Public Safety
Division of
Emergency Management

This page is intentionally left blank

Executive Summary

The standard State Hazard Mitigation Plan was written by The Nevada Division of Emergency Management (NDEM) and approved by FEMA in 2004. In 2007, the Plan was completely revised in format and content. To accomplish this, DEM formed the Nevada Hazard Mitigation Planning Committee (NHMPC). A Planning Subcommittee was thereafter established to review all sections of the Plan and assist in its updating.

This plan is a living document. Improvements and modifications to the plan will be made during the ensuing two-year period leading up to the next revision deadline. The Subcommittee noted during the current revision process, that the lack of NDEM staffing and fiscal constraints impeded the efficient development of the written Plan. NDEM staff and Cynthia Bagley, a volunteer who devoted much of her time from January to August in the revision of this document, reformatted the plan's structure and provided a skeleton for the Subcommittee. The Subcommittee began meeting monthly in June of 2007 and continued until the completion of the revised Nevada SHMP in September of this year.

As the plan must meet the requirements of the Code of Federal Regulation (44 CFR 201) those requirements were set out for each section. The Subcommittee was tasked to provide information and direction relevant to their expertise and authority. Thereafter recommendations were made by the Subcommittee to NDEM staff. Changes as recommended were resubmitted to the Subcommittee at subsequent meetings. This ensured final review and approval of each recommendation by the members of the Subcommittee. It should be noted that the membership of the Subcommittee expanded and contracted based upon the expertise required for each element of the Plan. For example: Division of Health and Human Services provided expertise during the capability assessment relevant to funding sources and program management.

It is anticipated that this plan will provide the basis and guidance for the hazard mitigation program necessary throughout the State of Nevada. Its goal is to achieve a lessening of the loss of life and property and the enjoyment of a safer environment by its citizens.
